

FOR IMMEDIATE RELEASE

EasilyDo Email App Expands to Business Users with Support for Microsoft Exchange *Fast, Simple and Secure Email with an Assistant Built in to Organize Your Travel and Receipts, One-Click Unsubscribe from Junk, and More*

November 30, 2016 -- Mountain View, CA -- [EasilyDo](#), the artificial intelligence (AI) company that helps people save time and get things done, today announced that its free Email app for iPhone and iPad is now available for use with Microsoft Exchange: <http://apple.co/2fXIAo6>. Mail the way it should be—fast, simple, and secure. The Email app also works with major mail accounts, including: Gmail, Yahoo! Mail, iCloud Mail, Hotmail, Outlook Mail, Office 365, and IMAP.

Designed with an intelligent assistant, Email simplifies how you find information across all of your mail accounts. With just a few taps, access only what you need at a glance and share contacts, travel itineraries, event tickets, restaurant reservations, bills and receipts. Email offers consumers the fastest way to unsubscribe in just one click from mail they do not want to receive, and is the only app of its kind that blocks read receipts from senders to preserve user privacy. The app showcases its AI prowess with Signature Assistant, a feature ideal for business users due to its unique ability to discover and extract HTML signatures directly from recently sent mail.

Higher efficiency mail practices are needed now more than ever before. The cost of a missed email can be more than just feelings of frustration—it can equate to real dollars lost. Recent research shows that the average number of business-related emails sent and received is set to rise from 121 per day now to at least 140 per day by 2018. By the end of 2019, the number of worldwide email accounts is expected to increase to over 5.2 billion.

“Business users love the assistant built into Email just as much as our lifestyle users do, so adding support for Microsoft Exchange is a natural next step for our app to serve them even better,” said Mikael Berner, CEO at EasilyDo.

Since launching earlier this year, EasilyDo’s Email app has already amassed more daily users than the popular cloud-based collaboration tool Slack did in its initial seven month entry to market.

Key Features of EasilyDo’s Email App for iPhone and iPad include:

- **Unsubscribe from junk mail** - Manage mail subscriptions in one place, with one tap.
- **Undo sent mail** – No regrets. Take mail back even after it’s sent.
- **iMessage from your inbox** - Send photos, attachments, and emails in just one tap.
- **Quick search for mobile mail** - Filter information by contact or keywords.
- **Organized travel with real-time alerts** - Flights, hotels, and more in one place!
- **Package tracking and alerts** - Manage your shipments at a glance.
- **Custom snooze messages** - Take care of messages when you want to.

- **Detect read receipts** – Stay private by blocking read receipts from being sent back a sender.
- **Automatically detect signatures** - Discover and extract HTML signatures from recently sent emails.
